Industries We Supply

What We Manufacture

As the manufacturer of the most advanced electronic key management systems, e-Track designs, builds, delivers, and supports electronic key management systems and software. Our solutions help leading operations save time, improve efficiency, and reduce risk. We fully understand the challenges our clients face in demanding environments. The market needs us to rapidly introduce new technology that helps operations meet health and safety regulations.

Our goal is to support businesses in achieving efficiency gains that positively impact their bottom line and enhance customer service levels.

Results

Increased efficiency, job satisfaction and customer service levels

Decreased key loss, wasted staff time, customer and contractor waiting times

Core Key Cabinets

Transform your key management with the Core Range of Electronic Key Cabinets, carefully crafted to redefine access control for your organization. Featuring a generous 100mm key clearance between the stainless-steel face panel and the door interior, these systems are ideal for companies looking to secure their vehicle and building keys. The staggered e-Fob positions maximize hanging space in a compact key arrangement, blank tracks can offer flexibility for larger key groupings. Contact us for more information.

20 - 3000 Keys

With 7 sizes, our core cabinets can hold a maximum of 3000 keys per controller consisting of 15 e200s.

High Security Measures

Provides cutting-edge security measures to safeguard your keys and assets. Anti-drill high secure locks.

User-friendly Navigation

Making key management effortless for all users within your company.

Scalable

A modular solution that ensures the ability for growth and global, multi-site control.

Real-time Insights

Real-time monitoring of key and user transactions, action history and much more.

Reliable Systems

Even in demanding environments, the core cabinets provide dependable performance for securing your keys.

Mini Key Cabinets

Featuring a generous 100mm key clearance between the stainless-steel face panel and the door interior, these systems are ideal for construction sites and businesses with a small number of keys, but still looking for state-of-the-art security measures. The staggered e-Fob positions maximize hanging space in a compact key arrangement, blank tracks can offer flexibility for larger key groupings. Contact us for more information.

10 - 30 Keys

Available in three sizes, an e10, e20 & e30, catering to various operational needs.

5 Inch Touch Screen

Smaller screen to accommodate the space efficient design.

Space Efficient Design

Specifically tailored for offices and areas where space is at a premium.

Cloud-Hosted Control

The same level of comprehensive cloud-hosted web control as larger systems.

Plug-and-Play

Our intelligent key cabinets are ready for immediate use following a quick and simple installation.

Self Installation

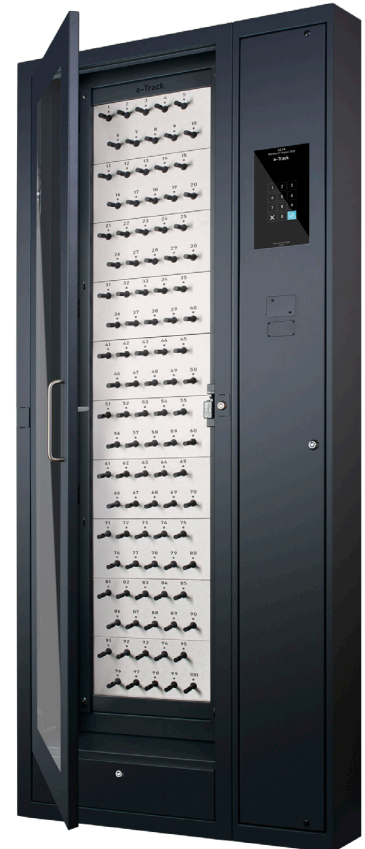

Quick and simple installation allows for little disruption when setting up the systems.

System Security

All of our cabinets are designed with security as a top priority. Keys placed in our systems are safeguarded against unauthorized access and withstand attempts at forced entry. The locks used in our cabinets feature a **tensile load of 5,800 NM**, ensuring they cannot be forced open manually.

The outer frames of our cabinets are reinforced with 1.5mm mild steel for the Core and Mini ranges. Cabinets with clear doors are equipped with 6mm and 8mm polycarbonate windows, depending on the cabinet size. These virtually unbreakable screens offer an added layer of protection for sensitive environments while still allowing for visual key audits with the cabinet securely closed.

Accessories

Cable Seals

150mm long flexible and durable cable seals are designed as a more secure way to attach a permanent key or item onto an e-Fob to secure your keys in place in the e-Track System. Available in red and black.

e-Fobs

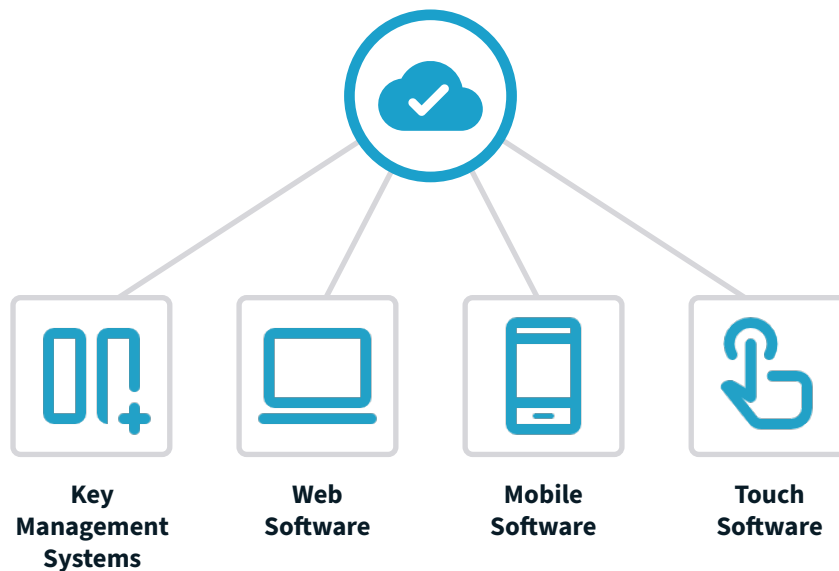

The e-Fob is the central component of any e-Track key management system. Produced in 50% glass filled plastic with an aluminium handle option, our RFID e-Fobs are extremely durable and come with a lifetime guarantee.

SaaS

Opting for our Cloud Hosting solution for your electronic key management system not only **guarantees security**, through US Amazon Web services. It is meticulously designed to provide a secure environment for your valuable information.

To ensure the highest level of safeguarding, our cloud infrastructure undergoes **regular pen testing** to identify and rectify any potential vulnerabilities so that your software and transactional data remains protected from potential threats. The robust infrastructure also means your critical **data and software are seamlessly accessible** at all times allowing you to manage your key systems efficiently, regardless of location or time zone.

- ➡ All our cabinets can be connected to the Cloud
- ➡ Allows e-Track to manage and globally update all systems simultaneously
- ➡ Reduces outdated cabinets which increases life span
- ➡ Quick set up with installation and testing being an average of 10 mins
